

Clinical Tips are now available on CenterLink

There is a new section of the Medical Staff tab of CenterLink called *Clinical Tips*. This site is designed to improve care in the child's medical home while providing CCHMC and community resources that will help primary care physicians refer children to a subspecialty service with minimal frustration on the part of the family, the referring physician, and the subspecialist. By providing this information, we aim for improvements in access, patient satisfaction, and physician satisfaction.

The Clinical Tips tab is here
