Significant Publications

Kalin, T.V., Wang, I-C., Meliton, L., Zhang, Y., Wert, S.E., Ren, X., Snyder, J., Bell, S.M., Graf, L., Whitsett, J.A. and Kalinichenko, V.V.: Forkhead box m1 transcription factor is required for perinatallung function. Proc. Natl. Acad. Sci. 105:19329-19334, 2008. (PMID:19033457)

This paper used conditional deletion of Forkhead box m1, a transcription factor previously known for its critical role in cell proliferation and tumorigenesis, in the maturation of the lung prior to birth. Deletion of Forkhead box m1 in the developing mouse lung did not alter cell proliferation, but was required for lung function. Foxm1 regulated the biosynthesis of surfactant associated genes critical for lung function at the time of birth. This work provides new

insight both into the functions of Forkhead box m1, as well as genes required for lung maturation and respiration.

Kallapur, S.G., Nitsos, I., Moss, T.J., Polglase, G.R., Pillow, J.J., Cheah, F.C., Kramer, B.W., Newnham, J.P., Ikegami, M., and Jobe, A.H.: IL-1 mediates pulmonary and systemic inflammatory responses to chorioamnionitis induced by lipopolysaccharide. Am. J. Respir. Crit. Care Med. 179:955-961, 2009. (PMID: 19234101)

This paper demonstrates the critical role of IL-1 β in the modulation of lung inflammation and the fetal inflammatory syndrome associated with intrauterine infection. Approximately 60% of very low birth weight preterm infants have evidence of intrauterine infection that initiates both systemic and lung inflammation in the fetus. This paper demonstrates the important role of IL-1 β in this process. Fetal inflammation can affect both neurodevelopmental outcomes and pulmonary inflammation associated with bronchopulmonary dysplasia, a severe respiratory disorder that accompanies preterm birth and intrauterine infection. Understanding the pathogenesis of intrauterine infection will aid in the diagnosis and therapy of lung disease and other prematurity associated disorders in newborn infants.

Nathan, A.T., Peterson, E.A., Chakir, J., and Wills-Karp M.: Innate immune responses of airway epithelium to house dust mite are mediated through beta-glucan-dependent pathways. J. Allergy Clin. Immunol. 123:612-618, 2009. (PMID: 19178937)

This work shows a novel role for beta-glucan mediated lung inflammation in response to house dust mice, a common asthma inducing allergen. Components of the dust mice bind to and activate receptors for sugars on resident pulmonary cells, in turn stimulating lung inflammation that leads to lung remodeling associated with asthma. This new pathway has implications for prevention and therapy of pulmonary allergy and asthma.

Suzuki, T., Sakagami, T., Rubin, B.K., Nogee, L.M., Wood, R.E., Zimmerman, S.L., Smolarek, T., Dishop, M.K., Wert, S.E., Whitsett, J.A., Grabowski, G., Carey, B.C., Stevens, C., van der Loo, J.C.M. and Trapnell, B.C.: Familial pulmonary alveolar proteinosis caused by mutations in CSF2RA. J. Exp. Med. 205:2703-2710, 2008. (PMID: 18955570)

In this multi-divisional collaborative work led by Dr. Bruce Trapnell, the underlying genetic cause of idiopathic pulmonary fibrosis was identified for the first time. Two siblings with severe and early Pulmonary Alveolar Proteinosis (PAP), a disease in which surfactant accumulates in the lungs, were studied. Mutations in the CSF2R, the receptor for GM-CSF (cytokine) required for surfactant removal from the airway caused PAP. The dysfunction of this receptor leads to the marked accumulation of surfactant material in the lung, impairing breathing and growth of these children. Since high doses of GM-CSF can stimulate the abnormal receptor, new therapies for this severe and life-threatening disease are likely to be developed for children who have this genetic defect. The paper provides a genetic basis for the diagnosis of familial pulmonary alveolar proteinosis, and a basis for future therapies.

Wan, H., Luo, F., Wert, S.E., Zhang, L., Xu, Y., Ikegami, M., Maeda, Y., Bell, S.M. and Whitsett, J.A.: Kruppel-like factor 5 is required for perinatal lung morphogenesis and function. Development 135:2563-2572, 2008. (PMID: 18599506)

In this work, Kruppel-like factor 5, a gene identified as an important mediator of "stem cells" was identified. Deletion of KLF-5 markedly inhibited perinatal lung function at birth, regulating the expression of surfactant proteins as well as the morphological maturation of the alveolar region of the lung required for gas exchange at birth. This work demonstrates a novel role for KLF-5 and its gene targets, furthering understanding the pathogenesis of respiratory disease in preterm infants, and repair of the lung after injury.

Division Highlights

Drs. Ardythe Morrow and Kurt Schibler

Clinical and translational research on novel predictive biomarkers for necrotizing enterocolitis and other outcomes of prematurity was launched this year with a 5-year R01 grant from the National Institute of Child Health and Human Development (NICHD), awarded to Drs. Ardythe Morrow and Kurt Schibler as co-PIs. These investigators have exciting preliminary data indicating that specific histo-blood group antigens measured in saliva provide powerful predictors of risk of necrotizing enterocolitis and death in premature infants. This grant supports the conduct of a cohort study of 600 premature infants through a collaboration in Cincinnati Children's and the University of Alabama at Birmingham. The predictive value of salivary and genetic biomarkers will be tested, and the role of microbial colonization in risk of necrotizing enterocolitis and death will be examined using state of the art genomic and informatics methods.

Division Collaboration

Collaboration with

Collaborating Faculty:

Divisional faculty have close collaborations with faculty in multiple divisions within CCHMC and with investigators throughout the world

Faculty Members

Jeffrey A. Whitsett, MD, Professor ; Chief, Section of Neonatology, Perinatal and Pulmonary Biology

Research Interests: Lung Development; Surfactant

Ann L. Akeson, PhD, Research Associate Professor

Research Interests: Pulmonary Vascular and Lymphatic Development

Henry T. Akinbi, MD, Associate Professor Clinical

Research Interests: Neonatal Infections and Blood Transfusions

Cindy J. Bachurski, PhD, Research Associate Professor ; Director, Research in Pulmonary Biology and Neonatology Elective, University of Cincinnati College of Medicine; Director, Summer Internship Program for High School Students, CCHMC

Research Interests: Gene Regulation in the Lung

Thomas Bartman, MD, PhD, Assistant Professor

Research Interests: Cardiovascular Development

Tanya E. Cahill, MD, Assistant Professor Clinical

Research Interests: Neonatal Abstinence Syndrome and High Risk Infant Follow-Up

Michael W. Crossman, MD, PhD, Assistant Professor Clinical

Research Interests: Intestinal Function and Host-Microbial Interactions; Bioethics

Vrushank G. Dave', PhD, Research Assistant Professor

Research Interests: Transcription, Lung Development and Cancer

Edward F. Donovan, MD, Professor Emeritus

Research Interests: Prematurity Prevention; Infant Mortality; Evidence-based Decision Making; and Clinical Research

Horacio Falcioglia, MD, Professor Clinical ; Director, Mother/Baby Unit Good Samaritan Hospital

Research Interests: Selenium Status and Neonatal Sepsis; Timing of Cord Clamping and Outcome; Vermont Oxford Data Base

Stephan W. Glasser, PhD, Associate Professor

Research Interests: Gene Regulation in the Lung

Lloyd Graf, Jr., PhD, Research Assistant Professor

Research Interests: Dysregulated Gene Expression in Inflammatory Lung Diseases

James M. Greenberg, MD, Associate Professor ; Director, Division of Neonatology; Medical Director, Regional Newborn Services

Research Interests: Pulmonary Vascular Development

Beth E. Haberman, MD, Assistant Professor Clinical ; Medical Director, RCNIC & Mercy Anderson Hospital Nurseries; Director, High Risk Infant Follow-Up Clinic

Research Interests: Infant Follow-up

Eric Hall, PhD, Research Instructor

Research Interests: Biomedical Informatics

Noah H. Hillman, MD, Assistant Professor

Steven B. Hoath, MD, Professor ; Director, Skin Sciences Institute

Research Interests: Skin Development

Significant Accomplishments

A Master Gene Controlling Mucus Production

Scientists in the laboratory of Dr. Jeffrey Whitsett, Executive Director of the Perinatal Institute, and collaborators have identified a single gene required for mucus production in the airways of both mice and men called SPDEF (Sam-pointed domainEts-like factor). SPDEF regulates a group of genes synthesizing, packaging, and secreting mucus. SPDEF is induced in cystic fibrosis, asthma, and chronic obstructive pulmonary disease (COPD) in the lungs of children and adults, where it contributes to lung infections and other respiratory problems. Understanding the genes and processes influencing mucus secretion will lead to improved diagnosis and treatment of common, severe childhood lung diseases.

Novel Genetic Mutations Cause Severe Lung Disease, Pulmonary Alveolar Proteinosis (PAP) in Children

Dr. Bruce Trapnell and collaborators identified a novel cause of severe lung disease, PAP, in children. Children with mutations in receptor for Granulocyte Macrophage Colony Stimulating Factor (GM-CSFReceptor) develop severe lung disease in which pulmonary surfactant accumulated, causing growth failure and respiratory distress. The receptor fails to signal macrophages in the lung to clear surfactant from the airways. The studies identified a new cause of this pulmonary disease, and provides the knowledge that will lead to improved diagnosis and therapy for this life-threatening pulmonary disorder, PAP.

A New Gene, Foxm1, is Required for Lung Function and Survival at Birth, and Plays a Role in Lung Tumorigenesis

Drs. Vladimir Kalinichenko and Tanya Kalin have discovered that Foxm1, a gene critical for cell proliferation in many organs, plays a critical role in the maturation of the lung prior to birth. Deletion of Foxm1 in the lung caused lung failure at birth but, surprisingly, did not influence cell proliferation. Lung failure was related in part to the lack of pulmonary surfactant. When Foxm1 was deleted after birth, mice failed to develop lung tumors in response to carcinogens and genes associated with lung cancer. The studies identified a new pathway critical for perinatal lung maturation, a factor important for the survival of preterm infants after birth. The study also provides new therapeutic targets for future therapies of lung tumors.

Grants, Contracts, and Industry Agreements

Grant and Contract Awards

Annual Direct / Project Period Direct

AKESON, A

Pulmonary Lymphatic Development and Neonatal Lung Disease

March of Dimes - National

6-FY07-317

06/01/07 - 05/31/10

\$76,779 / \$221,209

AKINBI, H

Role of Lysozyme in Airway Host Defense

National Institutes of Health R56 AI 050797	08/01/08 - 07/31/09	\$250,000 / \$250,000
Role of Goblet Cell Hyperplasia in Innate Defense of the Lung Cystic Fibrosis Foundation R457 CR02	07/01/08 - 06/30/10	\$40,000 / \$80,000
<hr/>		
BACHURSKI, C		
Novel Model of Adult Epithelial Stem Cell Expansion National Institutes of Health R21 HL 093706	04/01/09 - 03/31/11	\$125,000 / \$275,000
<hr/>		
BARTMAN, T		
Analysis of NFATc1 as the Mechanism by which Early Heart Function Regulates Endocardial Cushion and Valve Morphogenesis American Heart Association - Ohio SDG	01/01/06 - 12/31/09	\$59,091 / \$236,364
<hr/>		
BRIDGES, J		
Characterization of LPCAT, a Lung Lysopacyltransferase Parker B Francis Fellowship Program	07/01/07 - 06/30/10	\$48,000 / \$144,000
<hr/>		
DAVE, V		
PTEN/PI3K/AKT Pathway in Lung Cancer Ohio Cancer Research Association	07/01/08 - 06/30/09	\$45,454 / \$45,454
Calcineurin Effectors in Pulmonary Homeostasis American Heart Association - National SDG083010N	01/01/08 - 12/31/11	\$70,000 / \$280,000
<hr/>		
HILL, K		
ODH Division of Family Services Regional Outreach Education Program Ohio Department of Health 31-3-001-1-BM-08	10/01/08 - 09/30/09	\$110,000 / \$110,000
<hr/>		
IKEGAMI, M		
Role of C/EBPalpha in Cytoprotection and Recovery from Lung Injury National Institutes of Health R01 HL 095464	04/01/09 - 03/31/13	\$250,000 / \$1,000,000
Efficacy of Sp-D Containing Surfactant for Treatment of Premature Newborns March of Dimes - National 6-FY09-235	06/01/09 - 05/31/12	\$86,628 / \$271,996
<hr/>		
JOBE, A		
Antecedents to Lung Injury in the Preterm National Institutes of Health R01 HD 012714	05/01/06 - 03/31/11	\$181,638 / \$954,405
<hr/>		
KALINICHENKO, V		
Fox Transcription Factors in Development of Pulmonary Capillaries National Institutes of Health R01 HL 084151	05/01/08 - 04/30/11	\$242,750 / \$728,250
Foxm1 Transcription Factor in Development of Non-Small Lung Cancer American Cancer Society - National RSG-06-187-01-MGO	07/01/07 - 06/30/10	\$167,256 / \$496,650
<hr/>		
KALLAPUR, S		
Mechanisms of Fetal Inflammatory Response Syndrome Induced by Chorioamnionitis National Institutes of Health		

R01 HD 057869

02/03/09 - 01/31/14

\$235,222 / \$1,249,399

KAPLAN, H**Impact of Context on QI Success: A Novel Framework**

Robert Wood Johnson Foundation

65149

10/01/08 - 09/30/10

\$74,833 / \$151,097

KING, B**Surfactant Protein D Decreases Lung Injury and Inflammation**

Ikaria

12/01/08 - 05/30/10

\$10,000 / \$10,000

KINGMA, P**Surfactant Protein D in Pulmonary and Systemic Host Defense**

National Institutes of Health

K08 HL 089505

07/01/08 - 06/30/13

\$119,350 / \$604,250

Neutrophil Function in Cystic Fibrosis

Cystic Fibrosis Foundation

R457 CR02

07/01/08 - 06/30/10

\$50,000 / \$100,000

LECRAS, T**Pathogenesis of Neonatal Lung Disease**

American Heart Association - National

EIA0740069N

01/01/07 - 12/31/11

\$90,909 / \$454,545

PERL, A**Regulation of PDGFR-alpha Expression by FGF during Alveolar Myofibroblast Differentiation**

American Heart Association - Ohio

GIA075563B

07/01/07 - 06/30/09

\$55,000 / \$110,000

SCHIBLER, K**NICHD Cooperative Multi-Center Neonatal Research Network**

National Institutes of Health

U10 HD 027853

04/01/06 - 03/31/11

\$264,124 / \$619,326

SHANNON, J**Role of HIF-1 in Fetal Lung Epithelial Differentiation**

National Institutes of Health

R01 HL 084376

02/01/07 - 01/31/12

\$358,951 / \$1,832,879

TRAPNELL, B**Role of Anti-GM-CSF Antibodies in Myeloid Cell Function**

National Institutes of Health

R01 HL 085453

04/01/07 - 03/31/11

\$250,000 / \$1,000,000

WAN, H**Roles of KLF5 in Lung Morphogenesis and Injury**

American Lung Association

07/01/08 - 06/30/09

\$28,600 / \$28,600

WANG, I-C**Role of FoxN1 in K-Ras Induced Lung Tomorigenesis**

National Lung Cancer Partnership

01/01/09 - 12/31/09

\$50,000 / \$100,000

WEAVER, T**Regulation of Respiratory Epithelial Cell Homeostasis**

National Institutes of Health

P01 HL 061646

08/10/04 - 06/30/09

\$1,329,780 / \$6,892,425

Weaver, T

Project 1

285,627

Current Year Direct Receipts

\$548,330

Total \$7,211,480
