

The 3 year Global Child Health Residency Pathway

Three Year Breakdown

PL-1

The first year of the Global Health Residency Pathway will emphasize general inpatient and outpatient clinical skills. Residents will participate in the same inpatient rotations as categorical colleagues, including taking an active role in assessing and treating children admitted to the hospital. Pathway residents will have one Global Health Advocacy month rotation.

Outpatient clinic experience will focus on indigent care by placing resident in one of several community health centers in Cincinnati, or the Primary Pediatric Clinic (PPC) or Hopple Street Clinic, both which see a large indigent population.

During the PL-1 year, residents will participate in the ITCHING Global Health Interest Group, and monthly Pathway Meetings, as well as Global Health Retreats planned throughout the year.

Key to the PL-1 experience is a one month "Global Health Boot Camp." This one-month global health intense experience will be held at the Indian Health Service Medical Center in Gallup, NM. Residents will spend time working with pediatricians both inpatient and outpatient on the Gallup, NM Navajo Reservation. A good portion of this time will also be spent team building, learning about how to build a sustainable international health project, and to plan your own personal project. A didactic curriculum has been developed focusing on Global Health, some tropical diseases, building sustainable health projects, and addressing the social determinants of health, especially for the under-served population.

PL-2 and PL-3 Years

During the PL-2 and PL-3 years, residents will serve as senior resident on several inpatient general and subspecialty rotations, as well as rotate in the pediatric intensive care unit, neonatal intensive care unit, and in the emergency department.

For one month of your PL-2 and one month of PL-3 years, Global Health Pathway residents schedules will be reserved to participate in a global health rotation. During these global health rotations, residents will put into practice the project that they began developing during PL-1 year. In addition, residents will continue to participate in the ITCHING groups, the monthly Pathway meetings, and the Global Health Noon Conference series.
