

Pediatric Hereditary Cancer Predisposition Program (PHCPP)

What? A multidisciplinary, family-centered clinic for pediatric patients who are at risk of cancer due to an inherited cancer syndrome or genetic condition

Services available include cancer risk assessment, genetic testing and counseling, recommendations for and facilitation of screening and management.

Who? An exciting collaboration between the Hereditary Cancer Program in the Division of Human Genetics and the Pediatric Hematology/Oncology Division at Cincinnati Children's Hospital Medical Center

Members of the team include patients and their families, genetic specialists, pediatric oncologists and other pediatric specialists.

When? Appointments will be available on the first Monday morning of each month beginning in January 2009.

How? Please call 513-636-4760 with questions and to schedule an appointment.
