

MyChart Bedside Features | MyChart Web and Mobile vs Bedside App

MyChart Bedside is a tool that allows families to view real-time information about the patient's vital signs, planned treatments and procedures, test results, medications, care team, education -- and more -- during a hospital stay at Cincinnati Children's. MyChart is very similar to MyChart Bedside, offering online access to portions of the patient's Cincinnati Children's electronic medical record, including outpatient test results and those viewed during the inpatient stay, past outpatient appointments and hospital admissions, billing information, and much more.
