What

This is a research study to learn more about the safety and effectiveness of a new drug, called mepolizumab, in treating asthma.

Researchers also want to know how the body reacts to the drug and if there is a change in the number of asthma attacks a person has while taking mepolizumab.

Who

Children, teens and adults 12 years old and older who been diagnosed with asthma AND:

- Have been using a steroid inhaler for 12 months
- Have been in the hospital or emergency room at least 2 times because of their asthma

Pay

Participants may receive compensation for their travel and time.
