**9 out of 10** parents in Price Hill "usually" or "always" feel that their child is safe at school.

The **Child Well-Being Survey (CWBS)** is a random-digit-dial (RDD) telephone survey of primary caregivers in the Greater Cincinnati/Northern Kentucky region. Primary caregivers, usually parents, are asked questions about one randomly selected child in their household. The CWBS was previously conducted in 2000 and 2005. The 2011 sample includes 2,083 completed surveys and covers several health topics, including: general health status, chronic conditions, usual source of care, oral health and preventive dental care, screen time and physical activity, food security, and neighborhood resources. The sampling error for the 2011 CWBS is ±2.1%; the margin of error for the Price Hill oversample is ±6.7%. The 2011 CWBS was supported by the United Way of Greater Cincinnati, the Health Foundation of Greater Cincinnati, the Center for Clinical and Translational Science and Training at the University of Cincinnati, and Vision 2015 of Northern Kentucky.
