

Anti-dsDNA Antibody IFA

The presence of anti-double stranded DNA antibodies (anti-dsDNA) is indicative of systemic autoimmune diseases and can be used in conjunction with other clinical findings to aid in diagnosis of systemic lupus erythematosus, rheumatoid arthritis, Sjogren's syndrome, scleroderma, hepatitis, and other mixed connective tissue diseases. Monitoring the titer of anti-dsDNA antibodies can be used to gauge the effectiveness of treatment¹⁻³. Anti-dsDNA antibodies are detected by indirect immunofluorescence on slides coated with the organism *Critidia luciliae*, whose kinetoplast fluoresces in the presence of anti-dsDNA antibodies. Positive results are reported as a titer from 1:20 to 1:2560. All samples positive for anti-nuclear antibodies are reflexively tested for extractable nuclear antibodies (ENA) and anti-dsDNA antibodies. For more information, call the lab at 513-636-9820.

Sample:

The only acceptable sample for this assay is serum collected in a gold top (SST) tube.

Requested volume: 1mL

Shipping Conditions:

- Ambient if sent within 24 hours
- On cold packs if sent >24 hours after collection

Testing Schedule:

Anti-dsDNA antibody testing is performed Tues and Thurs on first shift. For testing outside of this schedule, call the lab at 513-636-9820. **TAT:** 1-7 days

EPIC Test Code:

8000135

CPT Code:

86225
