

# Blood Pressure Technique and Updated Guidelines

## *Customized Training Opportunity*

Cincinnati Children's Hypertension Clinic offers a short presentation and training on the updated 2017 guidelines for pediatric hypertension along with education on manual blood pressure measurement. This can be done in person or over Zoom. The importance of the blood pressure technique is often overlooked. With inaccurate numbers, diagnosis of hypertension could be missed over the years. With proper technique, blood pressure elevations and normal blood pressures can be accurately identified. Contact your physician liaison if interested in this educational opportunity.

## *Training Video*

Medical staff can also view a training video about manual blood pressure measurement by following the link below.
