Office for Clinical and Translational Research (OCTR):

Testimonials

Working with the OCTR

“Working with the OCTR is, in essence, working with colleagues with the same vision, helping our children succeed! The quality, professionalism, team effort and friendliness of the OCTR is one of kind! We are lucky to work with such talented persons.”

Sergio V. Delgado, MD
Medical Director, Outpatient Services Division of Child and Adolescent Psychiatry
Division of Child and Adolescent Psychiatry

“I have conducted several clinical trials using the services of the OCTR and I am very satisfied with their services. The budget negotiations for contracts are relatively seamless. The study regulatory work and coordination are efficient. All the patient and outpatient components of the studies have gone well. The study team show genuine compassion toward our patients and families and are available to them during the study if problems arise. This allows me to continue my many other responsibilities in patient care, research, and teaching while still successfully offering this clinical trial opportunity to my patients. I prefer to focus on the clinical investigator portion of the research and leave the rest to the OCTR. I definitely plan to continue to use the OCTR for clinical trials.”

Donald L. Gilbert, MD, MS
Director, Movement Disorder Clinic and Tourette’s Syndrome Clinic
Division of Neurology

Regulatory Affairs

“The OCTR has helped tremendously with two clinical trials that I have been involved in. Both of these trials were taken over from an investigator who left the institution, and the OCTR made the regulatory oversight of these studies seamless. I really appreciated the flexibility with which our OCTR team member helped these studies transition.”

Bradley P. Dixon, MD
Division of Nephrology

“OCTR regulatory staff did a very nice job of helping me with a quick turn-around on a PCORI grant submission last month. They did a great job of reviewing and editing the application on a tight timeline. Given that they had not seen a PCORI application before, and it was different from the standard NIH or IND applications, I was delighted to get and add their feedback and insight into my application—it helped a great deal. I have since reached out to them in anticipation of my next submission.”

Richard F. Ittenbach, PhD
Division of Biostatistics and Epidemiology

Research Study Management

“Though our study is relatively complex with 8 blood sample collections after painful surgery, the OCTR research nurses have done a great job doing it effectively. They are very flexible and hard working. Flexibility is important for our research as we can’t reliably predict when a patient would be tolerating oral medication after surgery. Because of this positive experience with the OCTR staff, I have requested their help for another complex industry sponsored research.”

Senthilkumar Sadhasivam, MD, MPH
Pediatric Pain Management

Project Management (Single and Multi Center Studies)

“The OCTR has been instrumental in helping us translate our basic research into the clinic to improve the lives of children and adults affected by rare lung diseases. Their broad-ranging support has included preparation of clinical trial, informed consent, and report documents for our IRB, submission of several IND applications and supporting documents and reports to the FDA, development of significant NIH grant funding, and the conduct and regulatory accounting of investigator-initiated, commercially-sponsored, and academic network-based clinical trials. Clearly, we would not be where we are today without their help.”

Bruce C. Trapnell, MD, MS
Assistant Director, Adult Cystic Fibrosis Center
Co-Director, Translational Pulmonary Science Center

Study Start-up Team

“I have found the Start-up Team to be very helpful and resourceful. The Start-up Team has helped us with budgets, regulatory affairs, and review of our clinical trials. We have benefited by the detailed help offered by the Start-up Team. An impartial point of view is useful when working on clinical trials.”

Hannah Burke
Senior Financial Analyst
Division of Allergy and Immunology

Participant Recruitment and Retention

“Our lab was very impressed with the resources the OCTR recruitment team was able to provide for us. We were not previously aware of all options available in terms of recruitment or outreach; they brainstormed with us and helped us cast a wide net, posting recruitment flyer pads at multiple Cincinnati Children’s sites, not just our local site, and sending emails blasts to Cincinnati Children’s staff at key times. They also posted flyer pads for us at sister sites like UC and it was at their suggestion that we placed an ad in Cincinnati Parent magazine, and received study interest as a result. We have a very targeted study population we are trying to recruit, and the OCTR recruitment team helped us think beyond traditional avenues of recruitment. As a result we were able to engage in the community and put the word out about our study on a much more comprehensive and successful level than we had considered possible.

Beyond recruitment, they also ensured that we maintained the high standards Cincinnati Children’s is known for; working with us to design professional recruitment materials and offering suggestions on how best to interact with the public to get the word out about our study. Staff often sent us articles or community notifications they felt we may want to attend as representatives of our research team. Their consideration and hard work went a long way in helping our study.”

Cameron Lau
Clinical Research Coordinator III
Division of Neurology

Cincinnati Children’s
Research Foundation
Participant Recruitment and Retention (continued)

"We have partnered with the OCTR recruitment team on several research studies and have found them to be responsive, professional, and creative. The OCTR team creates personalized recruitment materials and generates innovative marketing ideas which result in improved research studies and ultimately lead to better outcomes for patients and the community we serve."

Melanie F. Myers, PhD
Director, Genetic Counseling Graduate Program
Division of Human Genetics

"The Office for Clinical and Translational Research has been absolutely instrumental in promoting the success of our familial preterm birth studies. The have played a major role in developing the subject recruitment materials, making the effort visible to the community, and being proactive in identifying new opportunities for information dissemination. The OCTR has delivered far beyond what we had hoped for!"

Louis J. Muglia, MD, PhD
Co-Director, Perinatal Institute
Director, Center for Prevention of Preterm Birth
Division of Neonatology

"We directly attribute the success of our study recruitment to the work of the OCTR. Without their help, we would have been limited in the scope of our recruitment and unaware of the range of resources the OCTR has to offer. Recruitment staff creativity, thoughtfulness and follow-through made participant recruitment accessible, streamlined and cohesive. The OCTR is effective and an incredibly beneficial asset to the Cincinnati Children’s community."

Ernest Pedapati, MD, MS
Ericketson/Wink Lab

"The OCTR has been extremely helpful not only in creating marketing materials and physically helping with research subject recruitment (e.g., ensuring flyers are posted throughout the hospital), but they also helped us to be innovative and efficient in our recruitment activities.

On numerous occasions, the OCTR has gone above and beyond the call of duty to raise the level of exposure of our Center as well as to ensure that our Center appears professional during community events."

Jeff Epstein, PhD
Director, Center for ADHD
Division of Behavioral Medicine and Clinical Psychology

"The OCTR recruitment team at Cincinnati Children’s has been instrumental in our ability to recruit and meet enrollment goals across several projects. The Cincinnati Children’s wide email blasts and well scripted radio, TV and newspaper ads allow us to access families to understand, as they consider participating. The website likewise provide a one page summary of the study that is easier for recruitment. The Altered Drug Metabolism recruitment materials impressed as well by the materials and presented them as an example to the other sites of what could be done to improve recruitment. The Altered Drug Metabolism recruitment materials likewise provide a one page summary of the study that is easier for families to understand, as they consider participating. The website resulted in a spontaneous request from a family to participate, that we otherwise would have missed."

Stavra A. Xanthakos, MD, MS
Co-Director, Steatohepatitis Center
Medical Director, Surgical Weight Loss Program for Teens
Division of Gastroenterology, Hepatology and Nutrition

"The OCTR contracts team has been an invaluable resource for the March of Dimes Prematurity Research Center Ohio Collaborative. As the principal coordinating site for this $10 million March of Dimes-funded research program, Cincinnati Children’s is responsible for distributing March of Dimes grant funding to the other Ohio Collaborative participating institutions. The contracts team prepares the annual subcontract agreements for each of the participating sites, working with us to assure the appropriate terms & conditions and necessary attachments are included. The team negotiates any proposed revisions with the contracting sites and follows up, as necessary, to assure all agreements are properly executed. I’ve had the pleasure so far to work with several members of the contracts team, all of whom conduct themselves in a professional manner and are very responsive to our needs."

Joanne Chappell
Director of Operations
March of Dimes Prematurity Research Center Ohio Collaborative

"Currently, the Center for Acute Care Nephrology has 8 or so active studies with external entities. In every instance, the OCTR contracts team has been a strong ally and advocate, highlighting areas of potential concern for me, requesting input and clarification from me, assisting me with interpretation of various issues. They are expedient and accessible, and are proactive in contacting the external entities. It is a pleasure to work with your office."

Stuart L. Goldstein, MD, FAAP, FNKF
Director, Center for Acute Care Nephrology (CACN)
Medical Director, Pheresis Service
Co-Medical Director, Heart Institute Research Core
Division of Nephrology and Hypertension
The Heart Institute

"Each experience I’ve had with the OCTR contracts team has been great. Not only does my division have many contracts, they are typically cumbersome to process. We work with the state of Ohio a lot and they like to send confusing contracts. The contracts team works directly with our funders to iron out contract language, invoicing requirements, and whatever odds and ends come up. They review all aspects of the contracts to be sure we can meet the requirements and do not hesitate to work on our behalf for better contract terms. They keep us in the loop and provide clarity when needed. They continually make the transition smooth for subcontracts coming in and going out of our division."

Julie Ison
Financial Analyst II
James M. Anderson Center for Health Systems Excellence

"My experience with the contracts team has been very positive. They are always willing to provide guidance when setting up a contract and have been very attentive to the needs of our division. I have worked with them to resolve a contract set up issue due to an originally unknown link between two separate awards. They came to my office and we were able to review the contract together, answering questions and making comments, and determine the necessary revised contract language. This personalized approach really helped minimize confusion and provided a great start to this contract revision."

Lila Robertson
Financial Analyst II
Department of Neurology

"I have found the staff in the contract team to be very knowledgeable, very professional, open to questions, and willing to work with us as a team. They always run their revisions by our PI before sending them to the contracting party. I feel confident when the contract team is negotiating a contract for us that they are protecting Cincinnati Children’s in all aspects of the contract, yet are willing to work with the other parties to reach a mutually agreeable agreement. They are well versed in the proper legal terminology required for our contracts. I feel that we are included and made to feel part of the negotiation process and have a great working relationship." Patrica Holishouser
Program Coordinator, Center for Acute Care Nephrology (CACN)
Division of Nephrology
