Manual Scoring for Sizing Them Up

Instructions

Step 1: Item-by-Item Responses and Reverse Coding
Please check the data for missing responses. If the patient has completed all items, use Worksheet A. If the patient has missing responses, use Worksheet B.

Copy the parent’ responses on the in the spaces designated for each numbered question. For items with a *, the item needs to be reverse coded. Please reference the Reversed Keyed Responses box (1 = 4 etc.). Enter the reverse codes in the shaded boxes for items with an *.

Note: If participants choose multiple response choices for the same question or they skip a question, do not assign the question a response value (i.e., leave it blank) and consider it missing.

Step 2: Scaled Scoring (if no items are missing—Worksheet A)
Scaled scores are obtained for each domain by using the equations found for each scale. The formula below is used to calculate scaled scores:

\[
\text{SCALED SCORES} = \frac{\text{Sum of responses} - \text{Minimal Possible sum (n} \times 1)}{\text{Maximum possible sum (n} \times 4 - \text{Minimum possible sum (n} \times 1)} \times 100
\]

Example: For a scale compromising three items, such as the Teasing/Marginalization on Sizing Them Up, and on the basis of the four-point Likert scale used, the calculation method is:

- Minimum possible sum: 3 items \( \times 1 \) point = 3
- Maximum possible sum: 3 items \( \times 4 \) points = 12

If the parent who completed the questionnaire obtains 7 points (e.g., 2 points for #2 + 2 points for #12 + 3 points for #14), the result is:

\[
\text{SCALED SCORE} = \frac{7 - 3}{12 - 3} \times 100 = \frac{4}{9} \times 100 = 44.4 \text{ points for the Teasing/Marginalization scale}
\]

Step 3: Missing Values (See Worksheet B)

For all scales, the number of items needed to score the scale is specified. Please follow the directions for Worksheet B to score this measure if items are missing.
Scaled Scores Worksheet A

* Reverse Keyed Responses *
1 (Never) = 4
2 (Sometimes) = 3
3 (Often) = 2
4 (Always) = 1
