2015 Pilot and Feasibility Recipients

The Digestive Health Center (DHC) is pleased to announce the recipients of its 2015 Pilot & Feasibility grants. We received a large number of competitive applications and faced a difficult task to select 4 recipients. Below we introduce the awardees and their research programs.

Maxime Mahe, PhD
Cincinnati Children’s Dept. of Pediatrics; Division of General and Thoracic Surgery

“Effects of the Enteric Nervous System on Human Intestinal Epithelial Functions”

Dr. Mahe will determine the molecular and cellular processes involving the enteric nervous system in the maturation of the human intestinal epithelial functions.

Takahisa Nakamura, PhD
Cincinnati Children’s, Dept. of Pediatrics; Division of Endocrinology and Developmental Biology

“Role of Argonaute-2 in Selective Hepatic Insulin Resistance”

Dr. Nakamura will investigate the role of hepatic Argonaute-2 in the regulation of mitochondrial function and lipid metabolism in obesity.

Ting Wen, PhD
Cincinnati Children’s, Dept. of Pediatrics; Division of Allergy and Immunology

“Analysis and Function of Esophageal Lymphocytes in Eosinophilic Esophagitis”

Dr. Wen will analyze the single-cell transcriptomes of intraepithelial lymphocytes in order to determine their role in the pathogenesis of Eosinophilic Esophagitis.

Chunyue Yin, PhD
Cincinnati Children’s, Dept. of Pediatrics; Division of Gastroenterology, Hepatology, and Nutrition

“Mutation of Crumbs Family Member 1 Causes Intrabiliary Bile Duct Paucity in Zebrafish”

Dr. Yin will define how a novel mutation in the crumbs family 1 gene, which plays a key role in maintaining epithelial polarity, leads to ductopenia in zebrafish.
The United States Food and Drug Administration (FDA) approved the drug Cholbam for the treatment of defects in bile acid metabolism. Cholbam was developed by Dr. James Heubi, a DHC member, and Dr. Kenneth Setchell at Cincinnati Children’s. Children born with the rare and potentially deadly bile acid metabolic defect accumulate intermediary toxic bile acids that cause liver damage. Drs. Heubi and Setchell discovered that the administration of cholic acid to affected children leads to the suppression of the accumulation of toxic bile acid precursors in the liver, decreased liver injury, and improved bile flow.

After many years of the team working with various suppliers to custom make cholic acid, they have the final product called Cholbam. It is marketed by Retrophin Inc. under the license from Asklepios Pharmaceuticals LLC. Now children born with the bile acid metabolic defect are able to take a daily medication instead of joining the wait list for a liver transplant.

Congratulations to Drs. Heubi and Setchell for being able to see their discovery at the research bench move all the way to an FDA approved medication!

Drs. Heubi and Setchell Receive FDA Approval

The American Association for the Study of Liver Disease (AASLD) established a membership designation of “Fellows” to identify members who have made a significant contribution to the knowledge and/or practice of liver and biliary diseases.

Four DHC members were part of the Inaugural class: Drs. William Balistreri, John Bucuvalas, and Jorge Bezerra from Cincinnati Children’s and Dr. Kenneth Sherman from the University of Cincinnati.

Congratulations to these DHC members for being part to the Inaugural class of AASLD Fellows.
Stark Honored as a YWCA Career Woman of Achievement

Lori Stark, PhD, ABPP, Director of Behavioral Medicine and Clinical Psychology and the Arnold W. Strauss Endowed Chair for Mentoring, was honored as a YWCA Career Women of Achievement in Cincinnati. The Award was established in 1980 to increase community awareness and appreciation of the diverse contributions of women in the work force and in the community.

Bezerra Elected to AAP

Jorge Bezerra, MD, DHC Director, was elected to the Association of American Physicians (AAP). He is the Division Director of Gastroenterology at Cincinnati Children’s. Dr. Bezerra has joined a highly prestigious organization that was founded for the advancement of scientific and practical medicine. Fewer than 10% of AAP members are pediatric investigators. The following DHC members are AAP members: Drs. Fred Finkelman, Peggy Hostetter, Marc Rothenberg, and Jeffrey Whitsett.

New DHC Members

Ting Wen, PhD is Instructor in the Division of Allergy and Immunology, Department of Pediatrics at Cincinnati Children’s. His research focus on characterizing the intra-epithelial lymphocytes present in the intestines of patients with Eosinophilic Esophagitis.

Maxime Mahe, PhD is Instructor and a new faculty member in the Division of Pediatric General and Thoracic Surgery, Department of Surgery at Cincinnati Children’s. Dr. Mahe studies the effects that the enteric nervous system has on the intestinal epithelial barrier.

We congratulate these DHC Members on their outstanding accomplishments.
Cincinnati Hosts 2015 SPLIT Annual Meeting

Studies in Pediatric Liver Transplantation (SPLIT) is a community of pediatric hepatologists, transplant surgeons, research coordinators, nurse coordinators, and other health professionals across the United States and Canada working together to advance knowledge in pediatric liver transplantation. SPLIT was established in 1995 as a research registry and has evolved into a multifaceted organization focused on improving outcomes for children receiving liver transplantation.

Dr. Bezerra Elected to AASLD Governing Board

Dr. Jorge Bezerra was elected as Councilor and member of the Governing Board of the American Association for the Study of Liver Disease (AASLD), effective January 1, 2016. The Governing Board is responsible for managing the affairs of the AASLD by establishing administrative policies to promote liver health and quality patient care.

Dr. Bezerra will serve as Councilor for 3 years and will become President of the Association in 2019. He will be the fourth Pediatric Hepatologist to serve as AASLD President.

Congratulations to Dr. Bezerra on this prestigious leadership role.

Save the Date- 2015 William and Rebecca Balistreri Lecture

Dr. Ronald Sokol will be the 2015 William and Rebecca Balistreri Lecturer for Translational Research in Hepatology. Dr. Sokol is the Arnold Silverman, MD, Endowed Chair in Digestive Health in the Department of Pediatrics at the University of Colorado. He is also the Section Head of Gastroenterology, Hepatology, and Nutrition, Director of Colorado Clinical and Translational Sciences Institute, and Associate Medical Director of the Pediatric Liver Center and Liver Transplantation Program. Dr. Sokol is a graduate of the Cincinnati Children’s Gastroenterology fellowship program. His research focuses on pediatric liver disease and transplantation.

Dr. Sokol will present his research on Tuesday October 20 as part of the DHC Seminar Series. Additionally, Dr. Sokol will participate in “Balistreri Rounds”, an opportunity to discuss a complex liver patient case on Wednesday October 21.

DHC Seminar Series- Summer Break

There will be no seminars in July or August. Our fall seminar series will begin on Tuesday September 15. Seminars are held on Tuesdays at noon in CCHMC Location S Room 6.125.

Light refreshments are provided. The enrichment series includes distinguished speakers from outside the Academic Medical Center as well as conferences by investigators from Cincinnati.

For all publications, please acknowledge the DHC as follows:
“This project was supported in part by PHS Grant P30 DK078392 (insert name of core that you used) of the Digestive Disease Research Core Center in Cincinnati.”
Request for Pilot and Feasibility Applications

The Digestive Health Center (DHC) is accepting applications for pilot projects to conduct basic, translational, patient based, or outcomes research broadly relating to pediatric digestive disease. Funds are intended to allow investigators to collect preliminary data sufficient to support an application for independent research through traditional NIH mechanisms. Funding for projects will range from $40,000 to $50,000 depending on budgetary needs and number of selected applications. Eligible applicants must have a faculty appointment. DHC membership is not required.

Applications are due Monday December 7, 2015 at 5:00 pm. The application forms and submission guidelines are available on the website.

For further information contact: Aaron Zorn, PhD, Pilot and Feasibility Program Director at aaron.zorn@cchmc.org or Cindy Wetzel, PhD, DHC Program Manager at cynthia.wetzel@cchmc.org.

Rohit Kohli, MBBS Joins DHC Leadership

We are pleased to announce that Dr. Rohit Kohli has become an Associate Director of the DHC. He will provide invaluable guidance to the operation of the DHC and will direct the Clinical Component that supports the infrastructure for conducting clinical research.

Dr. Kohli is an Associate Professor in the Division of Gastroenterology, Hepatology and Nutrition at Cincinnati Children’s and was a recipient of a DHC Pilot and Feasibility Award.

Dr. Kohli is a NIH R01 funded investigator leading a successful program on Nonalcoholic Steatohepatitis (NASH) and molecular regulation of weight loss induced by bariatric surgery.

Save the Date - Annual Scientific Symposium

The DHC will host its Annual Scientific Symposium and External Advisory Board Meeting on Tuesday March 1, 2016. The day will include a poster session and keynote address by Dr. Philip Tarr from Washington University in St. Louis. Abstracts are due Friday February 12, 2016. You do not have to be a member of the DHC to submit an abstract. This is an outstanding opportunity to present your digestive disease related work. Prizes will be given to students and trainees for the best poster presented at the meeting. Stay tuned for more details.
Moved to Location T

Over the summer, clinicians, researchers and staff moved into the new Clinical Sciences Pavilion (Location T) at Cincinnati Children’s. The new 15-story, 445,000 square-foot research tower officially opened on June 12 bringing the total space dedicated to pediatric research to over 1.4 million square feet making Cincinnati Children’s one of the country’s largest pediatric research centers.

The first 3 floors are dedicated to families participating in clinical trials. This centralized space allows families access to receive study-related exams, assessments, imaging and other tests in a one-stop shop. There is a pharmacy to compound and manage investigational medications, a shipping area where clinical samples can be quickly packed in dry ice, and a metabolic kitchen where families can learn how to prepare foods for children with special dietary needs.

Dr. Kris Justus who is the Vice President of Research Operations and Assistant Director of the Research Foundation at Cincinnati Children’s as well as a DHC Internal Advisory Board Member, was part of the team that oversaw the 3 years of construction.

The Division of Gastroenterology, Hepatology, and Nutrition moved their clinical operations and clinical research to the 8th floor and the research laboratories moved to the 9th floor. Dr. Cindy Wetzl, DHC manager, is located in room T9.225 to address your questions regarding the DHC.

DHC Weekly Seminar Series Will Remain in Location S6.125

The DHC weekly seminar series will continue to be held in Location S room 6.125. Our fall seminar series will begin on Tuesday September 15 at noon with Dr. Rohit Loomba from the University of California, San Diego.

Our seminar series includes presentations from local and national investigators as well as presentations on cutting edge technology.

See page 4 for a complete schedule.

New Book Edited by DHC Member Dr. Gandhi

Drs. Chandrashekhar Gandhi, Cincinnati Children’s, and Massimo Pinzani, University College London, edited the book entitled *Stellate Cells in Health and Disease*. Dr. Gandhi is a DHC member and Professor in the Division of Gastroenterology, Department of Pediatrics and Department of Surgery at the University of Cincinnati.

The book is a comprehensive reference providing current knowledge and perspectives on the function of stellate cells affecting the liver and other organs. Chapters in the book describe both animal and human research, the relevance of findings from animal research to human pathophysiology, and sections on future directions in the study of liver fibrosis, hepatic biology, and pathobiology. *Stellate Cells in Health and Disease* is published by Academic Press and can be purchased at the Elsevier Store.
DHC New DHC Member

The DHC is pleased to welcome one new member.

Leah Kottyan, PhD is Assistant Professor in the Center for Autoimmune Genomics and Etiology, Department of Pediatrics at Cincinnati Children’s. Her research focuses on identifying transcriptional regulation of \textit{CAPN14} and \textit{LRRC32} (genes identified in an Eosinophilic Esophagitis risk loci) in esophageal epithelial cells.

Reminder: Cincinnati is Hosting 2015 SPLIT Annual Meeting

Studies in Pediatric Liver Transplantation (SPLIT) was established in 1995 as a research registry and has evolved into a multifaceted organization focused on improving outcomes for children receiving liver transplantation.

SPLIT will be celebrating its 20\textsuperscript{th} anniversary at its annual meeting on September 24-25 in Cincinnati. Dr. John Bucuvalas, a DHC Member and Professor in the Division of Gastroenterology, Hepatology, and Nutrition at Cincinnati Children’s, is organizing the meeting.

For more information regarding meeting registration visit the SPLIT Annual Meeting website.

2015 William and Rebecca Balistreri Lecture

Dr. Ronald Sokol will be the 2015 William and Rebecca Balistreri Lecturer for Translational Research in Hepatology. Dr. Sokol is the Arnold Silverman, MD, Endowed Chair in Digestive Health in the Department of Pediatrics at the University of Colorado. He is also the Section Head of Gastroenterology, Hepatology, and Nutrition, Director of Colorado Clinical and Translational Sciences Institute, and Associate Medical Director of the Pediatric Liver Center and Liver Transplantation Program. Dr. Sokol is a graduate of the Cincinnati Children’s Gastroenterology fellowship program. His research focuses on pediatric liver disease and transplantation.

Dr. Sokol will present his research on \textbf{Tuesday October 20} as part of the DHC Seminar Series. Additionally, Dr. Sokol will participate in “Balistreri Rounds”, an opportunity to discuss a complex liver patient case on Wednesday October 21 at 7:30 am.

Interested in Becoming a Member?

By becoming a DHC member, you will receive subsidies on many core services and resources. Your orders will receive priority at the cores. Membership is open to all Cincinnati Children’s and University of Cincinnati faculty members involved in digestive disease research. If you are interested in joining the DHC, visit our website for further instructions.

For all publications, please acknowledge the DHC as follows:

\textbf{“This project was supported in part by PHS Grant P30 DK078392 (insert name of core that you used) of the Digestive Disease Research Core Center in Cincinnati.”}

**Annual Scientific Symposium**  
**Tuesday March 1, 2016**

Poster Session: 9:30 to 11:45 am  
Location S Room 1.203 and 1.204  
Keynote Address: Phillip Tarr, MD  
Location R Room 3381 (Research Auditorium) 12:00 pm

The Digestive Health Center (DHC) will host its Annual Scientific Symposium and External Advisory Board Meeting on March 1, 2016. The day will include a poster session and keynote address by Dr. Phillip Tarr from Washington University School of Medicine at St. Louis. Building on the success of previous years, the poster session will feature work related to any area of digestive disease, including the four DHC themes:

1) Chronic Liver Disease  
2) Inflammatory and Diarrheal Diseases  
3) Obesity and the Digestive System  
4) Development and Digestive Diseases

You do not have to be a member of the DHC to submit an abstract. Prizes will be given to students and trainees for the best poster presented. Visit the [DHC website](http://dchcwebsite.com) for the abstract submission form and instructions. Abstracts must be submitted electronically by Friday February 12, 2016 to cynthia.wetzel@cchmc.org.

---

**Members’ Research Receive National Press**

The research work of DHC members Drs. Thomas Inge, Michael Helmrath, Meg Zeller, and Stavra Xanthakos was published in the November 6 issue of *The New England Journal of Medicine*. The results showed that adolescents who underwent bariatric surgery had significant improvements in weight, metabolic health, and quality of life at 3 years post-procedure. The research team is part of Teen-LABS (Longitudinal Assessment of Bariatric Surgery), a multi-center clinical study examining the effects of bariatric surgery which is funded by the National Institute of Diabetes and Digestive and Kidney Disease. Teen-LABS is the largest and most comprehensive analysis of bariatric surgery in adolescents.

Additionally, the research work of DHC members Drs. Yui-Hsi Wang, Artem Barski, Fred Finkelman, Simon Hogan, and Marc Rothenberg was published in *Immunity*. They discovered a new cell type, an IL-9-producing mucosal mast cell, that produces large amounts of interleukin-9 (IL-9) which amplifies anaphylactic shock in response to ingested food. This study demonstrates that in addition to immune antibody immunoglobulin E (IgE) one needs IL-9 to trigger a severe food allergy response. Their findings will provide a therapeutic target for food allergy treatment.

Congratulations to both research teams for having their work receive national attention.
Keystone Symposia - Stem Cells & Regeneration in Digestive Organs

Dr. James Wells, DHC Associate Director, is part of the Scientific Organizers for the Keystone Symposia on Stem Cells and Regeneration in the Digestive Organs. This is a joint meeting on Islet Biology: From Cell Birth to Death (X5).

The Stem Cell and Regeneration in Digestive Organs Symposia will bring together a broad range of experts who are investigating stem cells from interrelated fields of the digestive system for the first time.

Session topics include:
- Gastrointestinal Lineages from Pluripotent Stem Cells
- Disease Modeling
- Stem and Progenitor Cells in Homeostasis
- Translational and Clinical Applications
- Hurdles to Translation

The meeting will take place in Keystone, Colorado from March 13-17, 2016. The abstract deadline is December 15, 2015 and the discounted registration deadline is January 14, 2016.

Visit the Symposia website for more information and online registration.

Changes to NIH Application Forms and Instructions

Periodically the National Institutes of Health (NIH) will modify the application forms and instructions to accommodate changes in policy, new business needs, and occasionally to decrease the amount of information required to be submitted.

Below is a summary of the changes to NIH grant applications:
- An emphasis is placed on scientific rigor by including experimental details so others may reproduce and extend their research findings.
- Inclusion of how relevant biological variables, such as sex, are factored into studies using vertebrate animals and human subjects in the Significance and Approach Sections of the Research Strategy
- Requirement to include a summary describing authentication of key biological and/or chemical resources.
- Age of a child will be defined as individuals under the age of 18 years old instead of 21 years old for the Inclusion Policy.
- Requiring less information in the Vertebrate Animal Section to remove redundancy with information required at the institution level.
- Decrease in the number of data tables required for Training Grant submissions.
- New application forms will be required for due dates of May 25, 2016 and beyond.

For detailed information regarding all of these changes visit the NIH Grants & Funding website.

Understanding Pathology Research Core Technician Charges

Cincinnati Children’s Pathology Research Core provides researchers with state-of-the-art morphology services. The Core is able to accommodate specialized work requests. When a request falls outside routine services, the Core needs to charge for Technician Time. Some examples of Special Requests include:
- Sectioning with the investigator to look for specific landmarks
- Modified procedures that results in additional steps to accommodate custom detection
- Digital Scanning that requires extensive data annotation
- Partial services, such as coverslip only application, which would not incur a full charge

If you have questions as to whether your request requires additional technician time, please discuss your project with the Pathology Research Core staff in advance for clarification.

Remember the DHC subsidizes the cost of histological services and interpretation. For more information contact: Meredith Taylor at meredith.taylor@cchmc.org or 513-636-3478.
New Subsidy for Fluidigm C1 Single-Cell RNA-Seq Analysis

The DHC leaders worked with Dr. Steve Potter, Director of the Cincinnati Children’s Gene Expression Core, to support Fluidigm C1 Single-Cell RNA-Seq Analysis. This is a powerful technology that enables a unique look at dominant molecular signatures for individual cell and cell groups. The DHC will provide 25% of the total cost for the service.

For more information contact Shawn Smith at shawn.smith@cchmc.org or 513-636-0290.

DHC Competitive Renewal Due Summer 2016

Next summer the DHC leadership will be submitting the DHC competitive renewal application to NIH. In the upcoming months Jill Soldano, DHC administrative assistant, will be contacting DHC Members requesting information regarding their research programs.

Kevin Hommel, PhD, Associate Professor in the Division of Behavioral Medicine and Clinical Psychology, Department of Pediatrics at Cincinnati Children’s, has accepted the invitation to serve on the NIH Behavioral Medicine, Interventions and Outcomes Study Section.

Congratulations on this outstanding accomplishment!

DHC New DHC Member

The DHC is pleased to welcome one new member.

Soonah Shin, PhD is an Assistant Professor in the Division of Pediatric General and Thoracic Surgery, Department of Pediatrics at Cincinnati Children’s. She is a member of the Liver Tumor Program.

Dr. Shin’s research focuses on deciphering the molecular basis underlying liver cancer, with a focus on adult hepatic progenitor cells and fetal hepatoblasts.

Interested in Becoming a Member?

By becoming a DHC member, you will receive subsidies on many core services and resources. Your orders will receive priority at the cores. Membership is open to all Cincinnati Children’s and University of Cincinnati faculty members involved in digestive disease research. The Digestive Health Center (DHC) held its Annual Scientific Symposium on Tuesday, March 1. Phillip Tarr, MD from Washington University School of Medicine at St. Louis presented the keynote address “The Gut Microbiome: A New Vista on Neonatal Health”. A total of 40 posters were displayed by researchers from Cincinnati Children’s and University of Cincinnati. The posters represented 9 Divisions in the Department of Pediatrics and 6 Departments within the University of Cincinnati, College of Medicine. Additionally, there were 9 posters displayed highlighting research core services. Prizes were awarded for the best presented posters:

**Tie for First Place:** Chatmanee Lertudomphonwanit, MD (Clinical Observer, Cincinnati Children’s, Gastroenterology, member of Dr. Jorge Bezerra’s lab) for “Identification of Novel Biomarker Distinguishing Patients with Biliary Atresia and Intrahepatic Cholestasis and Translational Studies in the Mouse Model”. Jeffrey Rymer (Graduate Student, Cincinnati Children’s, Allergy and Immunology, member of Dr. Marc Rothenberg’s lab) for “CAPN14 Localizes from the Cytoplasm to the Nucleus Upon PMA with Ionomycin Treatment and Cellular Differentiation”.

**Second Place:** Erik Karmele (Research Assistant, Cincinnati Children’s, Center for Autoimmune Genomics and Etiology, member of Dr. Stephen Waggoner’s lab) for “Trusting Their Gut Instinct: Innate Lymphoid Cells Utilize Cytolytic Mechanisms to Regulate IgA”.

See Page 2 for more highlights from the Annual Scientific Symposium.

**Peter Perrin, PhD from NIDDK Visits the DHC**

Dr. Peter Perrin, Director, Digestive Disease Centers Program, Division of Digestive Diseases and Nutrition of the National Institute of Diabetes and Digestive and Kidney Disease (NIDDK) at the National Institutes of Health visited the DHC on March 2. Drs. Jorge Bezerra and Cindy Wetzel presented an overview of the DHC to Dr. Perrin and gave him a tour of Cincinnati Children’s. Dr. Perrin met with junior investigators as well as the directors of the DHC Cores and Dr. Aaron Zorn, Director of the DHC Pilot and Feasibility Program.

This was a great opportunity to showcase the rich scientific environment and state-of-the-art core services of the DHC.
Photos and Highlights from Annual Scientific Symposium Continued

We would like to specially thank: Jill Soldano, Talithia Bankston, Ruth Castle, Angie Cain, GiGi DiPuccio, and Joan Kasten for their superb organizational efforts and assistance with the Annual Scientific Symposium.

We also thank those who reviewed posters:

Heidi Kalkwarf, PhD, RD Joins DHC Leadership

We are pleased to announce that Dr. Heidi Kalkwarf has become an Associate Director of the DHC. She will direct the Clinical Component that supports the infrastructure for conducting clinical research.

Dr. Kalkwarf is a Professor in the Division of Gastroenterology, Hepatology and Nutrition at Cincinnati Children’s. She is a nutritional epidemiologist developing the dietary recommendations to optimize health, particularly bone health. Dr. Kalkwarf is replacing Dr. Rohit Kohli who has become the Medical Director of the Liver Transplant Program.

DHC NIH Competitive Renewal Due July 7

The Request for Application (RFA) Notice was released for the DHC NIH competitive renewal. The application is due July 7. The External Advisory Board gave the DHC leadership valuable feedback regarding our application.

Jill Soldano, DHC administrative assistant, will be contacting all DHC Members requesting information regarding their research program in the upcoming weeks. Please respond to her request in a timely manner.

Let’s work together to showcase the strength of our research base, the high quality of core services, and the rich scientific environment at Cincinnati Children’s and the University of Cincinnati.
DHC Member Highlights and New DHC Member

Way Receives E. Mead Johnson Award and Drukier Prize

Sing Sing Way, MD is the recipient of the 2016 E. Mead Johnson Award for Pediatric Research. This award is considered one of the most prestigious honors in pediatric research. Dr. Way is a member in the Division of Infectious Diseases at Cincinnati Children’s. Current DHC members that have received the E. Mead Johnson Award include Drs. Peggy Hostetter, Marc Rothenberg, and Jeff Whitsett.

Additionally, Dr. Way is the recipient of the inaugural Gale and Ira Drukier Prize in Children’s Health Research. This award honors an early career pediatrician who has made important contributions towards improving the health of children.

Heubi Receives Entrepreneurial Award

DHC member James Heubi, MD and Kenneth Setchell, PhD received the Cincinnati Children’s Entrepreneurial Achievement Faculty Award for developing the FDA approved drug Cholbam. This drug is used for the treatment of defects in bile acid metabolism.

Aronow Honored with Hutton Chair

Bruce Aronow, PhD is the first recipient of the John J. Hutton Endowed Chair for Biomedical Informatics. Dr. Aronow is a member in the Division of Bioinformatics at Cincinnati Children’s. Dr. Aronow has been a leader in establishing the field of computational biology.

New DHC Members

Eitaro Aihara, PhD is an Instructor in the Department of Molecular and Cellular Physiology at the University of Cincinnati. His research focuses on the adverse effects that H. pylori and clinical drugs have on gastric epithelium healing.

Takanori Takebe, MD is an Assistant Professor and a new faculty member in the Divisions of Gastroenterology and Developmental Biology at Cincinnati Children’s. Dr. Takebe is an exceptional pioneer in the field of regenerative medicine, generating liver, digestive, and non-digestive organoids from induced Pluripotent Stem Cells (iPSC).

We congratulate these DHC Members on their outstanding accomplishments.

For all publications, please acknowledge the DHC as follows:
“This project was supported in part by PHS Grant P30 DK078392 (insert name of core that you used) of the Digestive Disease Research Core Center in Cincinnati.”
