

# Peanut Allergies

## Adults 18 to 55 Years Old

### Investigational Peanut Vaccine Study Drug Research Study

#### What

We want to learn more about the safety and tolerability of an investigational peanut vaccine study drug for adults with non-severe peanut allergies. We want to see if the peanut vaccine study drug will train the immune system not to have an allergic reaction when the body comes in contact with peanut proteins.

#### Who

Adults, 18 to 55 years old, with a physician-diagnosed, non-severe peanut allergy or a history of peanut allergy, may be eligible to participate.

#### What's Involved

The study has up to 13 visits over a period of 8 1/2 months. Participants will have 6 weeks of study drug treatment (and receive either 4 doses of vaccine study drug or placebo, which contains no active ingredient) and 6 months of follow-up.

#### Pay

Participants will receive up to \$1300 for their time and travel.
