This handbook outlines information about your child’s journey in the Cancer and Blood Diseases Institute (CBDI).

There are many different types of cancer that all have their own treatments, and individual patients respond differently to different treatments. For this reason, no handbook can replace discussion with your child’s doctor and care team members. Ask them any questions you have.

You can find more information at: cincinnatichildrens.org/oncologyhandbook

Sincerely,
The CBDI Team
When to Call
513-517-CBDI (2234)

Call right away if...
your child has any of these symptoms:

- Temperature of 100.4°F (38°C) or higher
- Signs of infection
- Unexpected or excessive vomiting
- Changes in eating and drinking
- Changes or painful bowel movements
- Vomiting after receiving anti-nausea medicine
- Bleeding
- Swollen and painful stomach
- Changes in urine frequency or color

Call within 24 hours if...
your child has contact with anyone who is newly diagnosed with chickenpox or shingles.
How to Take a Temperature

A temperature should be checked any time your child does not feel well.

The temperature should not be checked rectally.
**Taking Temperature by Mouth**

1. Place the thermometer under the tongue.
2. Close lips fully until thermometer beeps.

**Taking Temperature Under Armpit**

1. Place the thermometer under the armpit and lower the arm to the side.
2. Hold the arm close to the body to assure that the thermometer remains in the armpit until thermometer beeps.
Understanding Blood Counts

Blood is made in the bone marrow, a soft spongy tissue within our bones, and carries oxygen and nourishment throughout the body. Blood is made up of red blood cells, white blood cells, platelets and clotting factors, as well as a liquid called plasma.

Individuals who receive chemotherapy or whose disease affects the bone marrow may have many changes in blood counts. Throughout treatment, we will check your blood counts often.
**Hemoglobin (HGB)**

Hemoglobin (HGB) is a protein within red blood cells that carries oxygen to provide energy to the body.

**Platelets**

A platelet is the smallest blood cell in the human body that makes clots to help stop bleeding if a blood vessel is cut or injured.

Meet the Team

A multidisciplinary group of healthcare professionals will support you throughout your child’s journey.
**Primary Oncologist**

The primary oncologist is the physician who will direct and oversee care throughout your child’s treatment, both inpatient and outpatient.

**Fellow**

The fellow is a licensed pediatrician who has chosen to further specialize in pediatric oncology. They work with your primary oncologist to coordinate your child’s care.

**Nurse Practitioner**

The nurse practitioner is a registered nurse with an advanced degree. They work with your child’s primary oncologist to coordinate your child’s care.

**Nurse Care Manager**

The nurse care manager coordinates your child’s care plan and can help you better understand the overall process and the specifics of your child’s plan.
Social Worker

The social worker provides emotional support and connects you with resources.

Palliative Care Team

The palliative care team seeks to improve quality of life for both the patient and the family. They focus on providing patients with relief from distressing symptoms, pain and the stressors of a serious diagnosis. Palliative care works with your oncology team to provide an extra layer of support.

Fertility Team

The fertility team assesses the risk to fertility based on your underlying condition or treatment you will receive and makes appropriate recommendations.

Psychologists

Licensed psychologists are fully integrated into the medical teams and see all new patients. They provide evidence-driven therapies to support patients and families within the medical setting.
Oncology Care Units

Your child will make many visits to the Cancer and Blood Diseases Institute to complete treatment.

Your child’s visits may be scheduled at either Burnet Campus or Liberty Campus. Our physicians, nurse practitioners, and other staff work at both locations so you will receive consistently great care and see familiar faces wherever you schedule your child’s appointment.
Burnet Campus

Cincinnati Children’s
**Burnet Outpatient Clinic**

*Where is the Outpatient Clinic located?*
The Cancer and Blood Diseases Institute Outpatient Clinic is located on the first floor of the A building.

*When are appointments available?*
Appointments are available Monday through Friday from 7:30 am until 4:30 pm. You can make an appointment by calling 513-517-CBDI (2234).

**Burnet Clinic Procedure Room**

*When are appointments available?*
Certain procedures requiring general anesthesia are performed in the Cancer and Blood Disease Institute Outpatient Clinic Monday through Friday.

*What types of procedures are performed here?*
These procedures may include lumbar punctures, bone marrow aspirates and bone marrow biopsies. The evening before a scheduled procedure, a nurse from clinic will call you to review your child’s current health status, verify the procedure, medications, scheduled appointment time and discuss the time at which your child may have nothing further to eat or drink before the scheduled procedure.
Where is the Day Hospital located?
Day Hospital is part of the Outpatient Clinic and is located on the 5th floor of the A building.

What is the Day Hospital?
At times, your child may need medications or treatments that take longer than two hours to receive. In this case, we will schedule an appointment in the Day Hospital. This may include infusions of blood, intravenous fluids, medications or chemotherapy. Because of the longer appointment times, the patient rooms in Day Hospital have hospital beds, chairs and televisions to make the visit more comfortable.

Where is the Inpatient Unit located?
At different times during your child’s therapy, your child may be admitted to the Inpatient Unit. The Inpatient Units are located on the 5th floor of the A building.

Who’s admitted to the Inpatient Unit?
Most of the admissions are scheduled when patients need chemotherapy that requires close monitoring. At other times, your child may be admitted because they need to get medications to recover from an illness or to prevent further complications.

Are the inpatient rooms private?
All of the rooms on the Inpatient Unit are private.
Who can visit my inpatient room?
Parents may stay in the patient room 24-hours a day. All other guests may visit between the hours of 8:30 am and 8:30 pm.

During flu season, younger children may be restricted from visiting. When children visit the hospital, we will take their temperature and screen them for signs of illness.

What are healthcare rounds?
Every morning a team of doctors, nurses, pharmacists, dietitians and social workers perform health care rounds. Families and patients are encouraged to take part in daily morning rounds. This is a great opportunity to ask the team any questions you might have. Doctors and nurses are available 24-hours a day to answer any questions or concerns.
Liberty Campus
Where is the Liberty Outpatient Clinic located?
The Liberty Outpatient Clinic is located on the Cincinnati Children’s Liberty Campus in Liberty Township, Ohio. The clinic is located on the 2nd floor of Location B above the Proton Therapy Center.

When are appointments available?
Appointments are available Monday through Friday from 8 am to 5 pm. You can make an appointment by calling 513-517-CBDI (2234).

Is it the same staff as Burnet Campus?
The Liberty Outpatient Clinic is staffed by the same doctors and nurses as the Burnet Campus.

Where is the Liberty Inpatient Unit located?
The Liberty Inpatient Unit is located on the Cincinnati Children’s Liberty Campus in Liberty Township, Ohio. The unit is located on the 4th floor of Location A.

Who is admitted to the Inpatient Unit?
Your child may be admitted to the Inpatient Unit because they need to get medications to recover from an illness or to prevent further complications. Talk to your child’s care team to determine if the Liberty Inpatient Unit is right for your child.

Is it the same staff as Burnet Campus?
The Liberty Inpatient Unit is staffed by the same doctors and nurses as the Burnet Campus.
Where is the Proton Therapy Center located?
The Proton Therapy Center is located at Cincinnati Children’s Liberty Campus in Liberty Township, Ohio. The center is on the first floor of Location B.

What is Proton therapy?
Proton therapy uses protons to treat pediatric and adult tumors. It has the advantage of greater precision, because it attacks the tumor but avoids healthy tissues and organs nearby.

When are appointments available?
Appointments are available Monday through Friday from 7 am to 4:30 pm. You can ask your child’s care team to help you make an appointment or call 513-636-2866 (ATOM).
