

Amitriptyline & Nortriptyline Test Information

Amitriptyline (Elavil®) and nortriptyline (Pamelor®) are two major tricyclic antidepressants (TCAs) used for treatment of depression and relief of chronic pain. Nortriptyline is a major metabolite of amitriptyline, and both have similar side effects, toxicities, and pharmacologic activities. Amitriptyline and nortriptyline have both antidepressant and analgesic effects through complex mechanisms that affect the production of certain chemicals in the human brain that are essential for maintaining mental health.

Amitriptyline and nortriptyline are often prescribed in combination and sometimes together with other antidepressant drugs. The serum concentrations of amitriptyline and nortriptyline need to be monitored on a regular basis in order to evaluate clinical responses and potential toxicity during therapy. The therapeutic range for amitriptyline is 125-150 ng/mL (150-300 ng/mL for combined amitriptyline and nortriptyline), and major cardiac toxicity can occur when serum concentration is above 500 ng/mL (combined or nortriptyline only).

High performance liquid chromatography (HPLC) used to be the analytical methodology for serum amitriptyline and nortriptyline. Recently, liquid chromatography-mass spectrometry (LC-MS) has been developed to improve assay throughput and selectivity. Our lab provides a rapid LC-MS assay combined with a stable isotope-labeled internal standard for serum amitriptyline and nortriptyline quantification. For more information, call the lab at 513-636-4203.

Sample Type:

Serum (Red, No Gel)

Volume:

1.5 mL

0.5 mL (minimum)

Specimen Preparation:

Spin/pour off, refrigerate.

Unacceptable Specimens:

Whole blood. Gel separator tubes, light blue (citrate) or yellow (SPS or ACD solution).

Stability:

Ambient: 5 days

Refrigerated: 2 weeks

Frozen: 6 months

Methodology:

Liquid chromatography mass spectrometry (LC-MS)

Reporting Units:

Quantitative: ng/mL

LC-MS Calibration Range:

5 – 500 ng/mL

Therapeutic Range:

95-250 ng/mL; >500ng/mL is toxic

(for combined amitriptyline and nortriptyline)

Shipping Conditions:

Refrigerated (cold pack), next day.

Testing Schedule:

Tuesday, 1st Shift (for testing outside this schedule, please call 513-636-4203). **Turnaround time:** 7 – 10 days.

Note: Report includes individual values for amitriptyline, nortriptyline, and total.

CPT Codes:

80335x2

Contact Information:
